Amendments to the Specification:

Please replace the following paragraphs:

Page 5, line 10 to page 5, line 15.

As shown within enclosure 100a of Fig. 1a, server Server 100 includes a designer 122, custom database information 123, a set of templates 124, user information 126, a set of pages 128, and a database 130. Designer 122 is a program configured to provide users 20 and 30 with an ability to create, modify, and manage custom databases. Designer 122 may be stored in any suitable storage device or other apparatus accessible by server 100 such as a RAM, a hard disk drive, a CD-ROM, a DVD, a DAT, or a floppy disk.

Page 5, line 24 to page 6, line 4.

After creating pages 128 and database 130, designer 122 stores pages 128 and database 130 in one or more locations. These locations may be located on server 100 as shown in Fig. 1a or on another computer system accessible using communications network 40. Designer 122 may create one or more directories for storing pages 128 and database 130 and may create these directories in a location specified by user 20 or user 30. For example, user 20 may provide a URL, such as http://www.myagency.org, where the custom database may be accessed. In this example, user 20 or user 30 may access the custom database by providing the URL http://www.myagency.org to a browser, such as Netscape Navigator or Microsoft Internet Explorer, or other suitable program.

Page 20, line 9 to page 20, line 16.

Figs. 4a through ~~4i-4h~~ illustrate an example of the use and operation of a custom database by user 20. User 20 accesses the custom database by accessing the location where the custom database is stored. For example, user 20 may enter a URL into a browser as described above. In response to the custom database being accessed, information is displayed to user 20 using to code and other information stored in pages 128. Pages 128 also provide user 20 with an ability to add, delete, and modify information in database 130. Further, pages 128 provide functions associated with database 130.
